WANTS YOU TO BE SAFE!

www.teamupnext.com

SAFETY IS AS SIMPLE AS ABC – ALWAYS BE CAREFUL.

~AUTHOR UNKNOWN

- The best way to ensure your safety is by using a little thing called common sense. Common sense can protect you against many accidents. You can use common sense to help you know basic things, like always wear safety glasses!
- You should also always keep your workspace clean and organized. This can help you to always know where things are, as well as creating a safer working environment.
- Make sure that your tools and working conditions are ideal – working with broken or damaged tools, or in a dark, dirty, or unsafe space can be very dangerous.
- Use the appropriate tool for the job – for example, never use a screwdriver for a hammer.
- Never run. Walking can greatly reduce the accident rate for your 2012 FIRST Robotics season.
- And finally, always listen to your mentors and safety captains when they tell you how to be safe! They know what's best for you.
